What's happening at the GKM site now.

Are the ponds big enough to hold that amount of water?

How long does the water have to settle before it can be released into Cement Creek?

Is it just one new pond?

More details on the water treatment facility being considered? When might it be completed?

Are there any potential dangers from having all of these chemicals in concert? The whole panel that have been tested for and found during the event, and what's left in the sediment.

KPNX

602-444-1212

Is there anyone who can interpret this data for KPNX?

Valerie Richardson | Reporter

The Colorado Statesman | The Washington Times

Hi, Lisa, today on the press call Melissa Harrison said she would get back to one reporter from the LA Times about the connection between the Gold King and Sunnyside mines. She did not commit to releasing the information to other reporters. I would also like to receive the information when/if she gives it to the LA Times reporter.

Also, EPA officials have said several times now that there will be an independent investigation into the spill. Who will be conducting the investigation, and has it begun? I asked the question today and the person responding said he didn't know.
